## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shiina

4. The patent shows heavy duty tire tread compositions, see the abstract. The use of solution polymerized styrene butadiene modified with tin is shown at [0018]-[0039]. The claimed hydrazone compound is shown at [0065]. Silica and carbon black are disclosed at [0168]-[0169]. The difference between this patent and the cited patent is that the tin modification is in the chain and optional at the terminal. The patent suggests introducing the tin in the chain as well as the terminal [0018]. As such, the claimed modification is obvious. The bound styrene content is considered anticipated or obvious

from the disclosed solution polymerized which results in polymers having the claimed properties.
